## **DETAILED ACTION**

### **Examiners's Amendment**

An examiner's amendment on the record appears below. Should changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Ms. Kathleen A. Tyrrell on July 21<sup>st</sup>, 2009. The application has been amended as Follows:

### **IN THE CLAIMS**

Claim 1 (original): A bipolar separator plate for use in a fuel cell, said separator plate comprising an anterior cathodic flow field, a posterior anodic flow field and two interconnected manifolds for each reactant supply and outflow, for flow of reactants from the anterior cathodic

Art Unit: 1795

flow field to the posterior anodic flow field and from the posterior anodic flow field to the anterior cathodic flow field; wherein the anterior cathodic flow field is at a 90 degree angle with respect to the posterior anodic flow field, wherein an active manifold and a passive manifold are positioned on each edge of the bipolar separator plate.

Claims 2 and 3 are cancelled.

### **REASONS FOR ALLOWANCE**

Claims 1 and 4 are allowed.

The prior art does not teach or suggest a bipolar separator plate including all of the claimed features. The most pertinent art includes Yamazaki et al. (U.S. Pub. No. 2002/0119359 A1)

The Yamazaki reference does not teach or suggest a bipolar plate as claimed by Applicant in claim 1. Furthermore, Applicant specification states that, "In the bipolar fuel cell stack of the present invention, two sets of manifolds are preferably provided on each plate, one passive and the other active. Further, the manifolds are arranged preferably on all border edges instead of simply two as in standard fuel cells so that the

Art Unit: 1795

cells can be rotated at a 90 degree angle with respect to the adjacent cell. Thus, the need for increasing transfer cavity seal size can be eliminated with the bipolar separator plates of the present invention when an active manifold is adjacent to a passive manifold." (Paragraph 0028) of Applicant Specification.

For these reasons, the claims are allowed over the prior art. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ben Lewis whose telephone number is 571-272-6481. The examiner can normally be reached on 8:30am - 5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
